

Date: 24 September 2026

At National, environmental stewardship is integral to delivering safe, reliable, and sustainable aviation and logistics solutions. We are committed to minimizing environmental impacts, addressing climate-related risks, conserving natural resources, and creating long-term value while supporting global connectivity and economic growth.

This Policy applies to all employees, contractors, and business partners acting on behalf of National. It reflects our commitment to responsible business practices, environmental compliance, sustainable innovation, and the integration of environmental considerations into decision-making across our operations and value chain.

Our Strategic Environmental Commitments

■ Climate Action, Sustainable Operations, and Collaborative Innovation

Reduce greenhouse gas emissions and environmental impacts by integrating sustainability considerations across aviation, cargo, passenger, logistics, warehousing, and ground handling activities. Through operational efficiency, fleet modernization, fuel conservation initiatives, Sustainable Aviation Fuel (SAF) strategies, lower-emission technologies, and collaboration with suppliers, customers, industry partners, regulators, and communities, we advance sustainable solutions, foster innovation, and support the transition to a more sustainable aviation and logistics sector.

■ Resource Stewardship and Pollution Prevention

Use energy, water, and materials responsibly by optimizing resource consumption, reducing waste, promoting reuse and recycling, preventing pollution, and protecting the environment through effective environmental management practices.

■ Compliance and Continual Improvement

Meet or exceed applicable environmental requirements and industry best practices while driving continual improvement through performance measurement, clear objectives and targets, risk-based decision-making, transparent reporting, and alignment with the IATA Environmental Assessment (IEnvA) framework.

■ Biodiversity and Wildlife Protection

Support biodiversity conservation by preventing the illegal transport of wildlife and wildlife products, complying with CITES requirements, and promoting responsible practices that protect ecosystems and natural habitats.

Sustainability Program Integration

This Policy is implemented through National's Sustainability Program and Environmental Management System (EMS), which translate our environmental commitments into measurable objectives, performance targets, and continual improvement initiatives. Guided by dedicated sustainability leadership and cross-functional collaboration, the program aligns environmental performance with the IATA Environmental Assessment (IEnvA) framework and supports relevant United Nations Sustainable Development Goals (SDGs).

Policy Governance

This Policy is communicated throughout the organization and made available to relevant stakeholders and the public. It is reviewed periodically to maintain its effectiveness, relevance, and alignment with evolving regulations, industry standards, and sustainable aviation best practices. Through leadership, accountability, innovation, and collaboration, National remains committed to protecting the environment, reducing its environmental footprint, and delivering long-term sustainable value.
